

Youssef Mohammed Dabash .Net Developer

Menoufia, Egypt | +201203755577 | yousefmohammeddabash@gmail.com | linkedin | GitHub

SUMMARY

Motivated .NET Backend Developer with a strong foundation in Object-Oriented Programming, Data Structures, and Software Engineering. Passionate about designing scalable RESTful APIs, robust database architectures, and writing clean, maintainable code. Experienced in building backend systems using ASP.NET Core with hands-on exposure to multi-tenant architectures and cloud deployments on Azure.

SKILLS

Backend Technologies: C#, ASP.NET Core Web API, ASP.NET MVC, Entity Framework Core, LINQ, ADO.NET
Architecture & Principles: Object-Oriented Programming (OOP), Data Structures & Algorithms, Clean Architecture
Databases: SQL Server, SQLite
Tools & Version Control: Git, GitHub, Postman, Visual Studio, VS Code
Other Skills: Python, JavaScript, HTML, CSS, Bootstrap

PROJECTS

- HerbexCare.ai** *🔗, Graduation Project (API)* 09/2025 – Present
- Architected a scalable backend system for managing herbal medicine data, custom recipes, and patient orders using ASP.NET Core Web API.
 - Implemented a robust multi-tenant architecture utilizing the Unit of Work and Repository design patterns, coupled with a dedicated Service layer, ensuring clean separation of concerns and strict data isolation.
 - Engineered complex relational database schemas with EF Core to manage order processing, AI-generated treatments, and dynamic financial dashboards.
 - Configured and deployed the application on Azure App Services (Linux environment), ensuring high availability and resolving runtime deployment issues.
- Survey Basket** *🔗, (API)* 01/2026 – Present
- Engineered a robust RESTful API for a dynamic polling system, managing complex entities (polls, questions, votes) and enforcing strict Role-Based Access Control (RBAC).
 - Integrated Hangfire for robust, asynchronous background job processing to offload heavy operations and improve system responsiveness.
 - Implemented structured logging and comprehensive audit trails utilizing Serilog, alongside advanced architectural features like API Versioning, Rate Limiting, and Caching.
 - Standardized global exception handling using the Problem Details Pattern (RFC 7807) to provide consistent API error responses, complemented by Health Checks for proactive system monitoring.
- Library Management System** *🔗, The One Reader (MVC)* 07/2025 – 11/2025
- Engineered a comprehensive web-based public library system using ASP.NET Core MVC to streamline book cataloging, member management, and borrowing workflows.
 - Optimized large-scale data retrieval and application performance by implementing server-side searching, pagination, and AJAX-driven asynchronous operations for a seamless user experience.
 - Architected the backend utilizing the Unit of Work and Repository patterns, integrating strict validation rules for secure book borrowing and real-time availability tracking.
- Order Management System** *🔗, E-Commerce (API)* 05/2025 – 09/2025
- Developed a robust Web API to orchestrate the complete e-commerce workflow, centralizing customer management, product catalogs, and automated invoice generation.
 - Engineered a dynamic state-management system to handle transaction lifecycles, ensuring real-time inventory synchronization (auto-stock deduction) and accurate tracking of order statuses.
 - Designed secure, role-based endpoints (JWT) to enforce strict data isolation for individual users while providing full administrative control over system operations.

EDUCATION

Bachelor of Science in Computer Science, Menoufia University, Egypt 09/2022 – 07/2026 | Shebin El Kom, Menoufia
Grade: (3.2) Very Good

LANGUAGES

Arabic — Native/Bilingual **English** — Conversational
